1.

Question 1

Scenario 1, questions 1-5

You are a data analyst at a small analytics company. Your company is hosting a project kick-off meeting with a new client, Meer-Kitty Interior Design. The agenda includes reviewing their goals for the year, answering any questions, and discussing their available data.

Before the meeting you review the About Us tab on their website and their business plan, linked below:

Meer-Kitty Interior Design About Us Page.pdf

PDF File

Meer-Kitty Interior Design Business Plan.pdf

PDF File

Meer-Kitty Interior Design has two goals. They want to expand their online presence, which means getting their company and brand known by as many people as possible. They also want to launch a line of high-quality indoor paint to be sold in-store and online. You decide to consider the data about indoor paint first.

To use the template for the survey feedback, click the link below and select “Use Template.”

If you don't have a Google account, download the file directly from the attachment below.

Kitty Survey Feedback - Meer-Kitty survey feedback

CSV File

When you refer to the Meer-Kitty survey feedback tab, you are pleased to find that the available data is aligned to the business objective. However, you do some research about confidence level for this type of survey and learn that you need at least 120 unique responses for the survey results to be useful. Therefore, the dataset has two limitations: First, there are only 40 responses; second, a Meer-Kitty superfan, User 588, completed the survey 11 times.

As the survey has too few responses and numerous duplicates that are skewing results, you should remove the duplicates and continue analyzing the remaining 29 responses.

1 / 1 point

True

False

Correct

Analyzing only 29 responses will not provide sufficient insights to make an effective business decision.

2.

Question 2

Scenario 1 continued

During the meeting, you also learn that Meer-Kitty videos are hosted on their website. For each product offered, there is an accompanying video for customers to learn more. So, more views for a video suggests greater consumer interest.

Your goal is to identify which videos are most popular, so Meer-Kitty knows what topics to explore in the future. Unfortunately, Meer-Kitty has just three months of data available because they only recently launched the videos on their site.

Without enough data to identify long-term trends about the video subjects that people prefer, what should you do?

1 / 1 point

☐☐

Watch the videos and use your gut instinct to identify which are most successful.

☐☐

Move ahead with the data you have to determine the top video subjects.

☐☐

Tell the client you're sorry, but there is no way to meet their objective.

☒☐

Find an alternate data source that will still enable you to meet your objective.

Correct

Without enough data to identify long-term trends, one option is to find an alternate data source that will still enable you to meet your objective. In this case, you could find data from a similar company and learn about its consumer interest and trends.

3.

Question 3

Scenario 1 continued

Now that you've identified some limitations with Meer-Kitty's data, you want to communicate your concerns to stakeholders. In addition to insufficient video trend data, your main concern with the indoor paint survey is that the data isn't representative of the population as a whole.

Clearly, one particular respondent, the superfan, is overrepresented. What does this situation describe?

1 / 1 point

☐☐

Confidence level

☐☐

Statistical significance

☒☐

Sampling bias

☐☐

Margin of error

Correct

This situation describes sampling bias. Sampling bias occurs when a sample isn't representative of the population as a whole.

4.

Question 4

Scenario 1 continued

The stakeholders understand your concerns and agree to repeat the indoor paint survey. In a few weeks, you have a much better dataset with more than 150 responses and no duplicates.

To use the template for the survey feedback, click the link below and select “Use Template.”

Link to template: [Kitty Survey Feedback](#)

OR

If you don't have a Google account, download the file directly from the attachment below.

Kitty Survey Feedback - New Meer-Kitty survey feedback

CSV File

If you are using the template, please refer to the New Meer-Kitty survey feedback tab. You notice that questions 4 and 5 are dependent on the respondent's answer to question 3. So, you need to determine how many people answered Yes to question 3, then compare that to responses to questions 4 and 5. That way, you will know if questions 4 and 5 have any nulls.

You decide to use a spreadsheet tool that changes how cells appear when they contain the word Yes. When using this tool, what is the word Yes?

1 / 1 point

☐☐

The value in a VLOOKUP statement

☐☐

The value in a CONCATENATE range

☒

The value in a conditional formatting rule

The value in the COUNTA range

Correct

To change how cells appear when they meet a certain value, use conditional formatting.

5.

Question 5

Scenario 1, continued

You have finished cleaning the data to ensure it is complete, correct, and relevant to the problem you're trying to solve. Then, you complete the verification and reporting processes to share the details of your data-cleaning effort with your team.

Your team notes one aspect of data cleaning that would help improve the dataset. They point out that the new survey also has a new question in Column G: "What are your favorite indoor paint colors?" This was a free-response question, so respondents typed in their answers. Some people included multiple different colors of paint. In order to determine which colors are most popular, it will be necessary to put each color in its own cell.

You use a spreadsheet function to divide the text strings in Column G around the commas and put each fragment into a new, separate cell. In this example, what are the commas called?

1 / 1 point

Delimiters

Substrings

MIDs

Partitions

Correct

The commas are delimiters, which are characters that indicate the beginning or end of a data item.

6.

Question 6

Scenario 2, questions 6-10

You've completed this program and are interviewing for a junior data scientist position. The job is at B.Spoke Market Research, a company that analyzes market conditions using customer surveys and other research methods. The detailed job description can be found below:

C4 B.Spoke Market Research Job Description.pdf

PDF File

So far, you've had a phone interview with a recruiter and you've secured a second interview with the B.Spoke team. The recruiter's email can be found below:

C4 S2 Email from Recruiter.pdf

PDF File

You arrive 15 minutes early for your interview. Soon, you are escorted into a conference room, where you meet Jodie Choi, the data science lead. After welcoming you, the behavioral interview begins.

For your first question, your interviewer wants to learn about your experience with spreadsheets. She says: Sometimes the team needs data that is stored in different spreadsheets. So, we use a spreadsheet function to find the information we need.

There is a spreadsheet function that searches for a value in the first column of a given range and returns the value of a specified cell in the row in which it is found. It is called SEARCH.

1 / 1 point

☐☐

True

☒☐

False

Correct

The VLOOKUP function searches for a certain value in a column to return a corresponding piece of information.

7.

Question 7

Scenario 2, continued

Next, your interviewer wants to know more about your understanding of tools that work in both spreadsheets and SQL. She explains that the data her team receives from customer surveys sometimes has many duplicate entries.

She says: Spreadsheets have a great tool for that called remove duplicates. In SQL, you can include DISTINCT to do the same thing. In which part of the SQL statement do you include DISTINCT?

1 / 1 point

The SELECT statement

The WHERE statement

The FROM statement

The UPDATE statement

Correct

To remove duplicates in SQL, include DISTINCT in your SELECT statement.

8.

Question 8

Scenario 2, continued

Now, your interviewer explains that the data team usually works with very large amounts of customer survey data. After receiving the data, they import it into a SQL table. But sometimes, the new dataset imports incorrectly and they need to change the format.

She asks: Is there a command or function that converts data in a SQL table from one datatype to another? You respond: Yes, it's the CAST function.

1 / 1 point

True

False

Correct

The CAST function is used to convert data in a SQL table from one datatype to another.

9.

Question 9

Scenario 2, continued

Next, your interviewer explains that one of their clients is an online retailer that needs to create product numbers for a vast inventory. Her team does this by combining the text strings for product number, manufacturing date, and color.

She asks: If you encountered a situation where you wanted to add strings together to create new text strings, which SQL function would you use?

1 / 1 point

COMBINE

CREATE

COALESCE

CONCAT

Correct

To add strings together to create new text strings, use the CONCAT function.

10.

Question 10

Scenario 2, continued

For your final question, your interviewer explains that her team often comes across data with extra leading or trailing spaces.

She asks: Which SQL function enables you to eliminate those extra spaces for consistency?

1 / 1 point

SUBSTR

LEN

LENGTH

TRIM

Correct

To eliminate extra spaces for consistency, use the TRIM function.
